

Complete Print Support for Citrix XenDesktop

Now XenDesktop environments can benefit from all ThinPrint .print Engine features, including the latest free Desktop Extension toolkit

Denver/San Francisco, May 12, 2010 – ThinPrint, the global leader in print solutions for Citrix XenApp™ and XenDesktop® announces a Desktop Extension toolkit for Citrix VDI environments. With the free toolkit, to be released in the third quarter this year, companies using XenDesktop environments will have access to all the features that the leading ThinPrint .print Engine 8.0 offers.

As a feature of .Print Engine 8.0, Session-in-Session printing support is included in the toolkit. Session-in-Session printing allows users to connect with a virtual desktop, then open a Published Application on the XenApp server, while still allowing all correct printers from the session first opened to be displayed.

Another key feature of the toolkit is the Virtual Channel Gateway, enabling virtualized desktops to print in masked networks when using a central print server, such as from branch offices. The latest V-Layer™ technology allows original printer driver administration to be entirely relocated to a central print server. Complex installation of drivers onto virtual desktops or client devices is no longer necessary.

To ensure users always have automatic access the nearest local or network printer, the Desktop Extension toolkit also includes an improved AutoConnect feature, which was released with .print Engine 8.0. AutoConnect GPOs (Group Policy Objects) specify which printer is available for which desktop or user. Installation on the virtual desktop is unnecessary.

The Desktop Extension toolkit is available as an msi file. The toolkit can be installed on the desktops remotely and unattended.

In addition to the features included in the Desktop Extension, .print Engine 8.0 customers benefit from features such as print data compression, SSL Encryption and bandwidth control.

"Desktop Extension allows us to seamlessly integrate our .print Engine 8.0 into Citrix VDI environments," said Charlotte Künzell, Board of Directors member at ThinPrint. "Organizations using XenDesktop as well as XenApp in their networks can especially benefit."
