

Printing for Citrix Receiver now available for workers on the go

Citrix Receiver™ with Citrix Dazzle™ will be fully supported by ThinPrint .print technology

San Francisco, California (May, 2010) ThinPrint, manufacturer of the global, strategic print solution for on-demand application delivery, today announced support for Citrix Receiver with Citrix Dazzle

Citrix Receiver is a simple and flexible way to deliver applications to users while administrators retain full control over IT functions. With the addition of the .print Client, users maintain the ability to print with minimal set up efforts. Support for Citrix Receiver by the ThinPrint .print Client will be centrally managed, all printing functions can be easily deployed for best possible printing support in a Citrix XenDesktop™ or Citrix XenApp™ environment.

Benefits include:

- ThinPrint technology can be installed via Citrix Receiver on demand and without user interaction, maintaining a seamless user experience when needing to print on the go
- Administrators can easily update the .print Client when new versions are published via the same administration tools used for Receiver
- The ThinPrint client and printers are always available when using Citrix Receiver to log in, regardless of device

“It is important for ThinPrint to continue to be a part of the new methods companies are choosing to deliver applications to their employees,” says Charlotte Künzell, member of ThinPrint’s Board of Directors. “Our primary goal as a software provider is to always deploy the most current technology for our customers so they can enjoy best possible user experience despite the challenges that printing continues to bring.”

Citrix Receiver with Citrix Dazzle now provides users the ability to go virtual, regardless of location, further increasing user flexibility. Users can access a virtual desktop with on-demand applications anywhere – from smartphone to netbook, PC to Mac. With the support of ThinPrint .print, users can maintain their ability to print even on the go.
