

Say Goodbye to Printer Drivers!

ThinPrint .print V-Layer™ Basic means installing printer drivers on workstations is no longer necessary

(Berlin, April 2010) Print specialist, ThinPrint is releasing its latest solution: .print V-Layer Basic. The latest product from the .print family ends the installation of printer drivers on desktop PCs in networks with print servers. Instead, drivers are only once set-up on the central print server.

The centralizing of print administration and processing with print servers can substantially reduce the effort required by administration and support. However all drivers for each operating system still need to be installed on each client computer. For each printer model, there can easily be four or five different drivers, with an equal number of work steps.

Help comes in the form of .print V-Layer Basic. With the ThinPrint developed V-Layer technology, original printer drivers from the printer manufacturer must only be installed on the print server. Installation on the desktops is no longer necessary.

"Printer driver deployment is a 'tour de force' in many companies" – Charlotte Künzell, Director at ThinPrint, "Our solution saves time, nerves and of course costs. It ensures a common user interface when configuring printer settings, substantially reducing helpdesk queries."

Further information about .print V-Layer Basic: www.thinprint.com/vlayerbasic

.print V-Layer Basic is available at more than 500 ThinPrint partners worldwide or in the ThinPrint Online Shop. A free demo version is available at the manufacturer's website: www.thinprint.com/demo

Licenses for .print V-Layer Basic can be ordered in packages of 25 or 100 desktops for € 18 per user. If ordering for 1,000 users and more, the user price is reduced to € 15.

Press Release
