

## **ThinPrint .print technology now supported by VMware View™ with PCoIP® display protocol**

(Berlin, March 11, 2010) ThinPrint, manufacturer of the global, strategic print solution for centralized application delivery, today announced that ThinPrint is expanding its integration with VMware View™. With this release, desktops virtualized by VMware View with the PCoIP® display protocol now support Virtual Printing provided by ThinPrint.

This enhancement allows end users to access local or network printers from a VMware View desktop without requiring additional print drivers to be installed on the desktop. With the new integration, companies can now save time and administrative resources when using VMware View with the PCoIP display protocol.

ThinPrint offers additional solutions that support VMware View with the PCoIP display protocol to complete any virtual desktop environment. The .print Engine for VMware View is for customers seeking to utilize print servers or thin clients in their View environments. This solution saves valuable administration time as well as increases performance and stability thanks to higher compression rates. In addition to those benefits, the newly released .print Server Engine 8.0 is fully implementable in mixed environments and offers additional Tracking Services, a simple way to manage company wide printing costs while adding reliability and support with cluster print servers.

VMware and ThinPrint have a long standing cooperation as ThinPrint .print technology also supports VMware ACE, VMware Fusion, VMware Workstation, VMware Player and prior versions of VMware View.

This release is available as a free upgrade to VMware View customers with a currently active VMware View Support and Subscription (SnS) contract.

Further information about printing in virtualized desktop environments can be found at: [www.thinprint.com/vmware-view](http://www.thinprint.com/vmware-view).
