Release: ThinPrint .print Virtual Desktop Engine 1.0

Friday, December 08, 2006 | 0 Comments

The VMware Technology Alliance Partner ThinPrint, a german company focused on mobility and printing solutions for enterprises, released a special version of its flagship product, .print, for Virtual Desktop Infrastructures (VDI) environments based on VMware Infrastructure 3.

The solution abstracts real drivers, automatically providing a virtual printer into VDI virtual desktops, compressing on the fly to-be-printed documents and sending them to a remote computer (real or virtual as well) where real printer drivers are installed.

The best feature probably is ability to work in 32 and 64bits environments, since not every printer available today is provided with drivers for new architecture.

Check a demo [here](#).
