Connect mobile staff

via UMTS and home users via DSL securely with just a few clicks of the mouse. Create SSL certificates and enable SSL encryption

The Remote Desktop Suite Standard securely connects home workstations and mobile staff within minutes. Without running from one workstation to another and without administration. Intelligent, secure connection of mobile staff and integration of home workstations increase a company's efficiency and enable more flexibility in reacting to new situations. An easily installed, secure, and inexpensive solution has been brought to the market by the software manufacturer, ThinPrint: the new Remote Desktop Suite Standard. The software is based on Windows Server 2003, has a wizard that completes all security settings incl. SSL encryption, certificates, and firewall configuration, and is ready to use in 5-10 minutes. An MSI software package is created during installation. When the package is loaded onto the UMTS notebook or home PC, the user can start remote access immediately and – without configuring anything – use his local printer.

The damage In an environment with 20 users, the software only costs about 120 euros per user. Extension Packs for 5 additional users or devices each cost only 450 euros net.
