

Europoles GmbH & Co. KG

■ The challenge:

A new production site in Oman had been connected to the headquarters in Germany via a site-to-site VPN connection with low bandwidth. The applications are made available on Citrix XenApp servers at headquarters. Due to the masked network, it was not possible to receive print jobs in Oman from the SAP system.

■ The solution:

The .print Server Engine and two .print Connected Gateways were installed on the print server at headquarters. This solution makes it possible for print jobs from SAP to be transmitted via TCP/IP to two SEH boxes in the masked network in Oman. The SEH boxes with integrated .print Client decompress the print jobs and forward them on to the network printers.

■ The result:

Employees in the new branch office can finally print from SAP too.

• Customer feedback:

“We are delighted that .print now allows us to enable our colleagues in Oman to make printouts too.”
