## ThinPrint 11 – Simply Better Printing

- ▶ HIGH AVAILABILITY WHEN PRINTING
- ▶ PRINTER SELF-SERVICE
- ▶ INCREASED PERFORMANCE

PREMIUM

### HIGH AVAILABILITY

With Windows Server 2012, Microsoft no longer supports print server and print server virtualization is not a sufficient replacement. ThinPrint 11 will not only fill that gap, but will provide high availability of printing on a completely new level, delivered as an easy to implement and maintain solution. Printing has never been so reliable and so easy.

- **HIGH AVAILABILITY FOR PRINT SERVERS:** If a print server is unable to be used, another print server in the same group automatically takes over. In addition to overseeing print server availability, ThinPrint also reacts to print specific health issues ensuring more protection than any other solution.

- **SERVER LOAD BALANCING:** By evenly spreading the print volume among the print servers in a group, Load Balancing ensures optimal printing performance.

- **EASY SERVER MAINTENANCE:** IT can set one or more print servers in maintenance mode. Transparent for users, their printers will be automatically re-connected to other print servers. Thus, IT can perform maintenance during normal working hours, without compromising the print operation.

- **CLIENT FAILOVER AND LOAD BALANCING:** ThinPrint Clients with equal configuration automatically replace other clients in the event of an error or can also be used for load balancing on the client side.

### MAIN ADVANTAGES

- **MORE RELIABILITY:** Server and client-side failover thanks to print-specific criteria and the convenient maintenance mode enable reliable printing at any time.
- **MORE PRODUCTIVITY:** Perfect print performance offers best support for business processes and increases productivity.
- **MORE TIME:** Avoiding printing errors saves time for users and IT administrators. Complicated manual assignment of which printers from which server should be mapped, is finally over.

# New Features

## ThinPrint 11 – Simply Better Printing

### PRINTER SELF SERVICE

With the new Printer Self Service, staff can add printers to their pre-assigned ones at any time. IT admins no longer need to distribute printers in a complicated way via scripts or policies, nor need to be active if users change locations.

#### FEATURES

- Users can find printers easily by the printer name, location or features.
- Users can define their default printer and change their print settings.
- The 'Printer Repair' feature provides first aid to users.
- Printers can be used anywhere flexibly, and new printers added easily.

#### ADVANTAGES:

- Users enjoy the newly gained flexibility and intuitive use.
- Easy for IT admins to set up – user rights on print servers are taken into account.
- Reduction of print administration tasks and helpdesk requests.
- Optimal use of the corporate printer fleet.

### EVEN BETTER PRINT PERFORMANCE AND EASIER ADMINISTRATION

The printing speed has once again been increased, especially for Citrix and Microsoft RDP environments or when printing complex documents. ThinPrint AutoConnect can flexibly remember printer properties, as well as the users default printer and uses them in the next sessions. In addition, printers can be now easily grouped. As a result, administration when assigning printers is greatly simplified. Additionally, ThinPrint 11 now offers a lot more group policies for easy configuration.

## Get Started Now!

Download **ThinPrint 11** and discover the many advantages.

The first 30 days are completely **free**, including all features.
