

Mobile Session Print

With ThinPrint Mobile Session Print, iPad and iPhone users print from any remote and virtual desktop session to local printers

More and more employees are working flexibly from multiple locations and are accessing from their mobile devices via remote and virtual desktop sessions both applications and documents within their organization. Even though session access is convenient and secure, iPad and iPhone users have been unable to print documents from the session to locally available AirPrint™ printers. ThinPrint now bridges this significant gap with ThinPrint Mobile Session Print.

THINPRINT MOBILE SESSION PRINT

Print from any Windows-based session

Whether Citrix Workspace App, VMware Horizon, Microsoft Remote Desktop Services – with ThinPrint Mobile Session Print, users with iPads and iPhones print from remote apps, virtual desktops, and any other Windows-based sessions.

Instant and flexible printing to local printers

ThinPrint users print with their iPad or iPhone to any AirPrint™ printer – no matter whether in the home office, when visiting a branch office or in a meeting room while visiting a construction site.

Print directly

A push notification informs about new print jobs and guarantees an intuitive printing experience. Printing starts instantly and the user carries on working in the session, as if they had never left.

Use a variety of devices

Even if you are traveling with your laptop and working in a remote session, you can initiate the print job as usual. The printout can then be picked up at a later time via the iPad or iPhone, for example at a printer in a branch office or on-site with the customer.

Secure mobile printing from the session

The ThinPrint Mobile Session Print feature can be enabled separately for ThinPrint users. The push notification doesn't contain any print data, because the print job is transferred from its own server directly to the app. The HTTPS protocol and certificate-based authentication guarantee secure transmission of print data between the app and the server.

THINPRINT MOBILE SESSION PRINT MEANS:

- ✓ Intuitive and instant printing.
- ✓ Printing with iPads and iPhones to local AirPrint™ printers.
- ✓ Printing from any remote session and from all virtual desktops.

LOCAL SESSION PRINTING FROM IPADS OR IPHONES SIGNIFICANTLY INCREASES PRODUCTIVITY – JUST TWO OF MANY EXAMPLES:

For end users

If you are using your iPad in the home office, then the network printers in the office are no longer available. You may still want to print out your presentation for the next day. ThinPrint Mobile Session Print makes this not just possible, but fast and easy.

For administrators

Often a network printer is not available for employees who are using their iPad in multiple locations like branch offices or construction sites. With ThinPrint Mobile Session Print, these mobile users can be both quickly and easily supported, significantly reducing helpdesk requests.
