

Helios Dr. Horst Schmidt Kliniken lowered the cost of printing medical documentation with Personal Printing

- **Challenge:** To ensure highest quality management, each patient at the HSK clinic is issued with a specialist monitoring sheet which ensures that the patient receives all necessary medical treatments. Previously, one employee was assigned the task of printing and distributing these monitoring sheets which resulted in significant costs.
- **Solution:** Personal Printing was installed on the server. Nursing staff print the required documents to a common holding account. When an employee authenticates at any of the central printers, the print job is retrieved and immediately printed out. Authentication is via the ThinPrintReader TPR-10 by SEH with RFIDbased smartcards.
- **Result:** Quality health management is supported, healthcare regulations met and confidentiality maintained, however the cost of printing essential medical documentation is significantly reduced.
- **Quote:** “The ThinPrint solution lowered the cost of printing medical documentation, and a unique advantage for us is that we are not bound to just one printer manufacturer as with other solutions. This means we remain free to take advantage of the best options available for us.” *Steffen Kamrath, System Administrator, Helios Dr. Horst Schmidt Kliniken*
