ThinPrint Hub – Eliminate Local Print Servers in Remote Offices

IT-independent branch and home offices • Secure printing without a VPN • High-availability printing • Remote management • Excellent value for money

ThinPrint®

Advantages

Plug & Play Administration:

The ThinPrint Hub is a tiny IoT device which automatically finds and creates printers in your corporate network. Simply connect it with a network cable and you're good to go. Each Hub can be managed remotely, eliminating the need for local print servers and/or VPNs for printing in branch offices.

Highest Security for Your Print Jobs:

Thanks to SSL-encrypted transmission of print data to the ThinPrint Hub, your print jobs and the information contained in them, remain safe. The ThinPrint Secure Tunnel ensures that print data is SSL-encrypted, even when printing via the internet and in masked networks. The ThinPrint Hub also identifies itself to authentication servers in IEEE 802.1X networks thereby adding an important security layer.

Reliable and High-Performance Printing:

The ThinPrint Hub supports the most popular ThinPrint features such as bandwidth control, compression and print data streaming. This ensures both fast printing and trouble-free work processes, even with low bandwidth capacity.

Free Printer Choice:

The ThinPrint Hub will work with all of your exisiting printers and the number of network printers used is also not limited. In addition, up to four USB printers can be connected to a ThinPrint Hub and used as network printers.

High-Availability Printing:

Using a second ThinPrint Hub enables load balancing and failover in case another Hub is disconnected. This means that full reliability and uninterruptible productivity are ensured when printing.

Home Office Printing:

The ThinPrint Hub enables remote home office workers to securely and conveniently print corporate resources to their home office printers. And when it comes to the hybrid workplace, the ThinPrint Hub is an ideal tool to reduce cost and complexity while improving efficiency.

Eliminate Local Print Servers:

Eradicating local print servers means capital expenses become operating costs. When combined with flexible and scalable subscriptions, this results in far lower and more predictable costs.

"Simple to set up and configure… you have optimized branch office printing in a flash – all this for less than half the cost of a PC too!"

Daniel Mar, Principal Consultant, Infront Consulting Group

Excellent performance plus value for money
